

## Central Manager

### Comprehensive Multi-Store Polling

Multi-store businesses require special tools and resources to manage a complex communication and information network. ASI's Central Manager System offers these management tools to larger chains in the same direct, user-friendly format that is the basis for our popular store-based Restaurant Manager™ POS System.

*Central Manager offers remote control of multiple stores for:*

- Multi-unit polling for staff and labor costs
- Uploading of payroll and menu changes
- Overall data management
- Consolidated reporting
- General ledger integration
- Integrated backoffice

The Central Manager module, like all ASI software, has been designed with ease of use and reliability in mind. The overall look and feel of the software replicates the Backoffice module that is standard with each Restaurant Manager site license. The system includes multiple automated processes that help to ensure successful completion of the overnight polling process.
